We have the luck to be part of birth, growth and evolution of kiteboarding – one of the youngest and the fastest developing sports in the world that brings unbelievable possibilities of riding, planning, carving but also high jumps, loops and many other unimaginable moves and tricks. Despite the fast kiteboarding will raise your adrenaline level, it is sport for everyone. Don’t you think so? Turn over the next pages of our catalogue. Are you already “in”? Just choose the right board for you.

More than 15 years in world of windsurfing, surfing and kitesurfing, cooperation with many famous pro riders, test riders, hundreds days and hours of thinking, research & development, testing in different wind and water conditions to bring you unforgettable experience riding CrazyFly kitboards – speed, comfort, great flex and maneuverability and unforgettable feeling of freedom, power and adrenaline.

Experience it yourself with unbreakable but still one of the lightest kiteboards in the world.

We absolutely love the CrazyFly boards. I first rode one in Barbados while working on the Caribbean article. The boards are well constructed, have the easiest footstraps to assemble (a huge plus from a retailer and traveler) and the fins are the perfect size for the average rider.

Adam, Catch Some Air USA

Just got the boards and they look great, I can’t wait to try one out. I’m dumbfounded.

Andy, UpAHill, UK

I’ve got the board yesterday, it’s really awesome...

Fabio, Argentina

The ‘06 board looks very nice, like the finish on the bottom.

Dave, Five-Forty Kitesports UK

I had the opportunity to test your boards in various conditions. Right from the first time I used them, I could easily control them and ride them. The huge flex and the power I felt was fantastic. CrazyFly, Karlin, Prague, Moravia, Prague, South Bohemia

The look of the board is impressive!

Reese, Wind Chill, South Africa

...I was able to test the board and was happy with its comfort, ride and good reactivity.

Phil, Extreme Kites, UK

What do I think about CrazyFly kiteboards?

THEY ARE SUPER-HIGH-QUALITY!!

THEY LOOK SUPER GOOD!!

THEY RIDE SUPER GOOD!!

Rock on!

Janne Riihelä, Finland

I had the opportunity to test your boards in various conditions. Right from the first time I used them, I could easily control them and ride them. The huge flex and the power I felt was fantastic.

Jens Møller, Denmark

We had a VERY windy friday. A steady 18~20knots, then increasing to 20~25. Perfect for testing out the 127.

Kaito Yokoda, Japan

We had a VERY windy friday. A steady 18~20knots, then increasing to 20~25. Perfect for testing out the 127.

Joao, Portugal

The testing of the new models went better than anyone had ever expected! We are more than over satisfied with your boards.

Bertalan, SurfStation, Hungary

It’s excellent, totally solid. A 10-miler ranger can hand out so much more time

Phil, Extreme Kites, UK

...I was able to test the board and was happy with its comfort, ride and good reactivity.

Mostafa, UAE

The boards they look really nice. We like how they look and ride complete and ready to ride.

Jeff, Prokitesurf, USA

We had a VERY windy friday. A steady 18~20knots, then increasing to 20~25. Perfect for testing out the 127.

I think I had the board for about 1.5 hours and I haven’t been able to get it back. I was able to test it on a 10m and a 12m

Mike, USA

I think I had the board for about 1.5 hours and I haven’t been able to get it back. I was able to test it on a 10m and a 12m.

Kaito Yokoda, Japan

We had a VERY windy friday. A steady 18~20knots, then increasing to 20~25. Perfect for testing out the 127.

...in the beginning was really focus on the big rocker the CrazyFly board had, but now its just turn into be a perfect shape. Much easier landing without dicking in, blid landings is easy in chopy water, that’s more made for ecip conditions xtrem flat water. But the CrazyFly is the real world freestyle board.

Joao, Portugal

You need the best CrazyFly boards to win the world cup. I’m not trying to brag, but I can’t help myself.

Mike, USA

I think I had the board for about 1.5 hours and I haven’t been able to get it back. I was able to test it on a 10m and a 12m.

Justin Blumenfeld, USA

The boards they look really nice. We like how they look and ride complete and ready to ride.

Jeff, Powkites, USA

We had a VERY windy friday. A steady 18~20knots, then increasing to 20~25. Perfect for testing out the 127.

Each rider needs a board which will not break in extreme conditions but is still very light. Full wood board is too heavy. We've found the solution! Board should be stiff and flexible at the same time, with dynamic and immediate response. Very important for fast planing and excellent landing. This is it! Guys need very thin fins to be the fastest on the water! and very strong and stiff during riding as well as undestroyable in case of beach start. Done! Are you able to make a board which is easier to control and more No problem! Concave bottom.

Do you know that shark is one of the fastest animals in the water? Check its skin. We need the bullet-proof bottom in case we make crazy start on the beach sand! We've checked it! How long will I glue the sandpaper on the board in order to avoid slippy grab? My knees are almost destroyed from choppy water riding and I'm tired of it. There are a lot of good straps, but sometimes they are soft, sometimes difficult to set up for different foot size and they turn during using… Solved! Some pads are too hard for landing and others are too soft to pull my foot out after hard landing. Completed! Sharp edges are not comfortable and they do zig – zag during carving.

Every customer is looking for nice design, … visible real carbon is always sexy. And everything has to be durable, UV stabile and scratch-proof. Welcome in crazy world of tattoos! Zero pads are too hard for landing and return and the nose to pull my front foot after hard landing. Sorted out! Simple solution for complicated problem. You are allowed to choose the right area on the deck where you usually grab your board for air tricks and just press the self-sticking grip very easily. The original CrazyFly grip allows comfortable and safe grip of the board. One of the main features of the kiteboard is its flex. We spent a lot of time of research and development to adjust optimal strength – flexibility ratio of our boards. Innovated asymmetrical flex tips provide high performance riding, soft smith landing and offer joy and comfort ride. It also saves your knees in hard choosy conditions.

We produce our fins from the best material available on the market. G10 allocate excellent strength, stiffness a durability. The profile of fins is radical thin to avoid any hydrodynamic resistance. Despite their thickness, fins provide top performance riding means in the most extreme conditions.

Our boards are equipped with the biggest quality asymmetrical adjustable footstraps which provide great holding of your feet on the board. Accurate stiffness and comfort. Easy and fast set up for any foot size. Antimagnet mounting ensures stable position of strap. The footstrap transfer feelings and feedback to the receptors of your feet. Only in case you perfectly feel your board, you can be effective to control it exactly like conditions request. On the other side, the pads transfer power of your muscles to control the move. Exact density of EVA is very important.

For you who know that shark is one of the fastest animals in the water. We must have the "bullet-proof" bottom in extreme water start on the beach sand! We're checked it!

The footstrap transfer feelings and feedback to the receptors of your feet. Only in case you perfectly feel your board, you can be effective to control it exactly like conditions request. On the other side, the pads transfer power of your muscles to control the move. Exact density of EVA is very important. The fin tips transfer feelings and information from the board to the receptors of your feet. Only in case you perfectly feel your board, you can be effective to control it exactly like conditions request. On the other side, the pads transfer power of your muscles to control the move. Exact density of EVA is very important.

Carbon is unique fibre with eminent weight-stiffness ratio and high specific strength. This high performance composite gives the board a custom made feeling.

Wood is in natural material with unidirectional fibres, exhibit high dynamic strength and very good impact resistances. The only problem is relatively high weight. In case of combination with lighter material which is a bit fragile alone we get optimum solutions. We reach laminated wood from ski industry and the best sandwich material HEREX. The core is CNC cut to reach the best profit for excellent flex.

Unique extruded thermoplastic top sheet fed with shark skin structure used on the bottom makes the board faster than others and scratch-proof against beach sand.
If you are looking for the most radical board in our Pro line model range, 120 is the right one. High-end construction, high performance composites used for the absolute top class board. This ultra light board is excellent for the highest jumps, comfortable landing, more than fast planing, precise manoeuvrability and sophisticated upwind riding.

127 Pro line model is our high-end and high-performance board. Excellent for strong wind conditions. Absolute unique flex in choppy water. You will definitely appreciate its light and strong construction and perfection in upwind riding. Invaluable 127.
Another high performance model from our Pro line with outstanding ability to go-upwind, early planning in light wind and easy maneuverability in strong wind. Its unbelievable weight makes you free to do any trick or jumps that you have been always dreaming about.
The biggest board from Pro line brothers. Also very light weight model immediately going upwind. Thanks to its asymmetrical flex control you will experience unforgettable comfort of ride. Built from top quality composite materials, 137 boards are faster than ever. It can also match beginners requirements for the right board to start kiteboarding.
Let us present our all-terrain vehicle. Allround is a great board for light wind conditions, suitable for both beginners and advanced riders. Immediate planning, easy control, no difficulty to jump and excellent landing are one of the main characteristics of this model. If you are looking for your first board, you can not miss it.

If wind picks up a bit and others are still sitting on the beach and waiting for more knots, you can take your CrazyFly lightwind board and enjoy immediate planning. XCR make its upwind riding abilities better than ever. This model will find its place in hearts of beginners as well as experienced riders.
At the beginning of this idea, there were a lot of kids on the beach showing their interest in kiteboarding. Kids are always curious and want to try everything. The safety, controllability and dependability of kite is better and better every day. We took a part of our job and we proudly present kid’s boards as one of the first brands in the world. Let our kids enjoy movements on the water and in the air. Our kids line introduces two small brothers of our pro line. The best solution for incoming pro riders.

Sorry men, this page is for women only! We didn’t forget our sweet babies and we’ve created boards, which gives girls fascinating feeling of riding, a lot of fun and essential adrenalin. The concept of these boards is very simple: to build a board, which will accept lighter, gentle and beautiful women’s body. Boards are suitable for expert women riders as well as for intermediate and advanced girls.
